

# The institutional AI knowledge hub for higher education

Turn fragmented course content into  
one governed learning environment

# 95% of students already use AI in their studies. Only 20% of universities have a policy for it.

Learnd.Ai brings lectures, recordings, PDFs, slides and reading materials into a secure, source-grounded learning environment.

Students can **search, revise and practise across trusted course content**, while institutions retain control over data, AI behaviour and deployment.

# What makes Learnd.AI different?

One knowledge space per module: content stays organised, not scattered

Learning that stays retrievable: search and revisit anytime

More than content generation: summaries, flashcards, quizzes, mock exams — one continuous journey, not isolated, one-off outputs

## From content to active learning

Connect content

Structure by module

Search, revise and practise

Retain and reuse knowledge

## What your institution gains?

- Greater content value
- Stronger engagement
- Better retention
- Fewer support queries
- Source-grounded AI
- Flexible deployment

Build a governed learning ecosystem
